# Camstudio offline installer

I'm not robot!

I'm not robot!

What is it? CamStudio is able to record all screen and audio activity on your computer and create industry-standard AVI video files and using its built-in SWF Producer can turn those AVIs into lean, mean, bandwidth-friendly Streaming Flash videos (SWFs) Here are just a few ways you can use this software: You can use it to create demonstration videos for any software program Or how about creating a set of videos answering your most frequently asked questions? You can create video tutorials for school or college class You can use it to record a recurring problem with your computer so you can show technical support people You can use it to record new tricks and techniques you discover on your favourite software program, before you forget them "Nick, here is what I think I'll do; rather than fork out the $300.00 bucks for [CENSORED], I'll just keep using CamStudio. "I am a self-employed consultant that works in the public safety community (cops, fire, ems, dispatch etc). What I have planned is to use CamStudio to capture on screen video for training vids. "Thanks for a great product and your help!" Joe Borgione www.AlpineGeographic.com Don't like the sound of your voice? No problem. CamStudio can also add high-quality, anti-aliased (no jagged edges) screen captions to your recordings in seconds and with the unique Video Annotation feature you can even personalise your videos by including a webcam movie of yourself "picture-in-picture" over your desktop. And if all that wasn't enough, CamStudio also comes with its own Lossless Codec that produces crystal clear results with a much smaller filesize compared with other more popular codecs, like Microsoft Video 1. You have total control over the output of your video: you can choose to use custom cursors, to record the whole screen or just a section of it and can reduce or increase the quality of the recording depending on if you want smaller videos (for emailing to people, for instance) or you can have "best quality" ones for burning onto CD/DVD. But all of these features would be worthless if CamStudio wasn't easy to use ... fortunately that's not the case. CamStudio can be learned in a matter of minutes and comes with a comprehensive built-in helpfile, so if you do manage to get stuck, you can simply hit "Help" and get the answers you need. So where can I get it and how much does it cost? You can download and use it completely free - yep - completely 100% free for your personal and commercial projects as CamStudio and the Codec are released under the GPL (for more details on this license, click here.) There are no royalties or any monies to pay. CamStudio's History CamStudio was originally released by a company called RenderSoft who were subsequently bought by a company called eHelp who used some of the technology in their program, RoboDemo ... Some time later, eHelp was bought by Macromedia who wanted RoboDemo (which was to become Captivate) ... Knowing that CamStudio did some of the stuff RoboDemo did for free (mainly export to streaming Flash), they released a newer version which fixed some bugs but most importantly, removed certain features. Gone was the ability to create SWFs, added was the requirement to register to use it, and over time, links to the various webpages that had CamStudio and its source code, became broken. However, I managed to find an earlier version complete with the related CamStudio video codec and the source code for both then put the website up so people could download them. Issues A number of people have mentioned having trouble viewing SWF videos generated by CamStudio. It turns out there's a bug which means you can't see anything if you try watching them with Netscape or Firefox (Internet Explorer works fine) ... The next update (2.5) will fix this but until then, here's a temporary workaround: Open the related HTML to the SWF you've just generated and look for the line starting with the "EMBED SRC" command ... Change the Width and Height values in this line to match values in the line starting with "OBJECT CLASSID". Save the file and you should be good to go ... I seem to be getting a lot of questions about a registration code ... the version of CamStudio available from this site doesn't require registration AND has more features, so uninstall v2.1 from your system, download and install CamStudio from here and you're good to go! If your computer's memory or virtual memory usage starts climbing rapidly when viewing a SWF authored by CamStudio to the point when your PC locks up so you have to reboot it, recreate the SWF from your source AVI file and in SWF Producer, make sure you select the Advanced tab and check the Memory Management tickbox (Manage Flash player internal memory). That should sort the problem out. Thanks to Ben Ward for the fix. CamStudio Updates If you'd like to be notified when I have some news related to CamStudio,signup to the forum (link opens a new window) you'll be "in the loop" ... Spread The Word ... I'd love to get CamStudio into the Top 10 Most Popular downloads at SourceForge ... for no other reason than ... um ... I'd like to, so tell as many people as possible ... If you'd like to link back to this site, here's some example code you can use: CamStudio - Free Streaming Video Desktop Recording Software A Plea For Help ... I've got big plans for CamStudio and want to continously improve it and the Codec as well ... but I'm not a programmer. The potential for CamStudio to be used as a professional training and support tool is huge and not just in the information technology and internet marketing arenas, but also in diverse markets and tasks like home eduation, recording online geneological research, keeping a video record of special offer prices on your favourite snowboarding (or whatever) website - you get the idea ... It doesn't matter if you're at home in Las Vegas or on an Alaskan Cruise - if you've got a laptop or PC you can use CamStudio. So if there are any Visual C++ programmers out there that have Flash, video encoding and codec experience who'd like a challenge, please get in touch. So, at some point in the near future I'd like to start accepting donations so any coders that work on this project will get some kind of financial reward in addition to the warm, fuzzy feeling they get from helping to resurrect this cracking piece of software ... so if you're feeling generous, please get in touch at the email address above and let me know. I'd also love to get your feedback on CamStudio ... what you liked, what you thought sucked and what you think is missing. DISCLAIMER: CamStudio is (c) Rendersoft Development. The version available from this website is developed independently under the terms of the GNU Public License V2. This website, the software (in whole or in part) and any other related content is not affiliated with, connected to, sponsored by, endorsed by or derived from Camtasia or Camtasia Studio from Techsmith.com nor any other product or software with a similar sounding name from any other company. Camtasia, Camtasia Studio and Techsmith are marks of Techsmith Corporation, registered in the U.S. and other countries. Softonic reviewCamStudio is one of the most comprehensive, functional, and popular screen-recording software programs. If you're interested in going beyond simple illustrations and need something to create amazing product demos or IT tutorials, this screen recorder will be an excellent choice. For many years, the program has been used by developers to provide technical support. With a simple and clean interface, the tool is easy to navigate and doesn't require you to possess any special skills. While CamStudio offers limited output file formats, i.e. AVI, you can use the program to convert AVI files to SWFs.A simple yet powerful screen recording tool!When you download CamStudio, the program allows you to record AVI or SWF videos of the desktop screen. Since it's a lightweight program, you can run CamStudio on a wide range of Microsoft Windows PCs, regardless of the hardware configuration. The toolbar lets you start, stop, and pause the recording in a single click. It also allows you to toggle the view, change the display screen options, and choose the preferred recording mode, i.e., SWF or AVI.How to use CamStudio?Compared to AMCap and Snagit, this free screen recorder is easier to use. With a couple of clicks, you can choose the specific area you want to record. With CamStudio, you manually select an area, window, region, or the entire screen. Additionally, you can use video and screen annotations to enhance the video output. Most importantly, the program comes with basic video editing features, which allow you to add effects—including captions, Xnote time stamps, system time stamps, and watermarks.From Video Options, CamStudio lets you select time-lapse settings, the quality, framerate, and compressor. Similarly, you can use Cursor Options to show or hide the cursor, enable visual feedback, and highlight certain areas on the screen. The program also lets you play around with Audio Options, which can customize speakers, the microphone, and video/audio synchronization.Does CamStudio have customization options?While Snipping Tool++ and other similar programs allow you to take screenshots, they don't offer a lot of customization options. On the other hand, CamStudio can be used to convert AVI files to SWFs, set pan speed, disable audio recordings, use keyboard shortcuts, and stop the recording automatically.Moreover, while doing all this, the program doesn't use a lot of system resources—and as such, you don't have to worry about the PC slowing down. With CamStudio, both the video and audio quality are excellent. Unfortunately, the program doesn't have a Help section, but you can easily search for troubleshooting information online.Is CamStudio a good choice?While there are plenty of screen recorders available online, CamStudio has been immensely popular among Windows users around the world. Compared to FastStone Capture and similar titles, it's a comprehensive package with basic video-editing features. The open-source program allows you to grab the desktop screen, take video screenshots, and capture images to create product demos, IT tutorials, and presentations.While a lot of people use screen recorders to capture static images on the screen, a video grabber can do a lot more. If you're interested in creating amazing video tutorials—especially for product demonstrations—CamStudio will be an excellent choice.Simply put, CamStudio records the video and audio activity on the computer's screen to create AVI video files. Moreover, it lets you turn these files into Flash videos (SWF). With this free screen recorder, you can add video annotations, screen captions, and other effects to the output files. It's the perfect way to produce a webcam movie yourself or create amazing illustrations and demos.It's worth mentioning that CamStudio features a built-in lossless codec, which produces high-quality results in small file sizes. As such, you don't have to worry about the files taking too much space on your hard disk. With CamStudio, you can record the entire screen, a specific region, or manually cut a specific area on the desktop. Last but not least, the program is easy to navigate and use.A hassle-free recording software!CamStudio is one of the most useful screen recording software around, which merges a wide range of features available in popular video capture and editing packages. The latest version of the program lets you choose from multiple codecs, allowing you to play around with different file formats. While the output file format is only available in AVI, you can use the built-in converter to create SWFs. With CamStudio, you're able to take screenshots and turn them into virtual art forms.
