Do you want to know how to find buried treasures in Minecraft? This guide will show you what to do and where to find one. Going on adventures in Minecraft allows players to explore its vast overworld and obtain various items and loot. And with each major update, the world of Minecraft only gets bigger and better. Buried treasures were one of the features added in the 1.13 Update Aquatic. With its expansion and adventure possibilities, players can now use explorer maps as a mini-challenge in locating buried treasures and be rewarded with tons of loot. Buried treasure maps are often obtained only as loot inside chests which are located in shipwrecks and underwater ruined structures respectively. Shipwrecks are small structures that resemble wrecked sailing ships. These are randomly generated deep in all oceanic biomes. However, there is a small chance of it generating beached above sea level, inside ocean monuments, icebergs, underwater ruins, or ravines. A regular shipwreck may contain up to 3 loot chests: a supply chest, a treasure chest, and a map chest depending on its generated sections that are still intact. Map chests are often generated in the lower section of the ship's stern. Underwater ruins or ocean ruins naturally generate underwater and they often resemble wrecked structures such as ruined huts and even one as large as an abandoned village. They are mainly composed of sandstone or stone bricks and are usually guarded by drowned mobs. At least 1 loot chest containing a buried treasure map is expected to be obtained within these ruins. Once you've acquired a buried treasure map, it's time to read it in order to locate where the treasure is buried. Start by holding the map in both hands. You can do this by holding the map with your right hand and simply dragging your mouse down. This will bring the map upwards revealing the entire map on your screen. When you see the map on your screen, you will also see that there is a white circle on the map. Depending on the size of the circle, it will tell you how close or far you are from the treasure. Based on the image below, the map is relatively close to the location shown on the map. Look at the treasure's coordinates on the map and locate where it is from your current position. Open the coordinates menu and check the direction of which you are headed. You can open the coordinates by pressing F3 on your keyboard for PC users or FN + F3 for Mac users. This will show you information of your current location including the XYZ coordinates, current biome, and more. Take a look at the "Facing" information tab. This will show you the direction which you are currently facing whether it is in north, south, east, or west. Based on the map shown below, the player must head towards North-East. North-east is between north and east. You may choose to head in one direction first, or simply go diagonally. Head towards the direction of the treasure. Continuously move towards where the treasure is located while keeping tabs on the map. The white circle on the map will move along with how far and in which direction you are from the treasure chest. Once you are close enough, the map will open up and reveal the terrain of the land. Keep walking until you reach the X on the map before you start digging. The buried treasure will always be on the X facing east. Start digging until you find the buried treasure. It's usually buried in sand so preferably bring a shovel to make digging quicker and easier. Once you find the treasure chest, make sure to loot everything inside especially the heart of the sea! Your own Minecraft server is only 5 minutes away! We support simple one click install for over 1000 unique modpacks. Start Your Server For Free! This Minecraft tutorial explains how to find Buried Treasure with screenshots and step-by-step instructions. Starting in the Aquatic Update, there are shipwrecks, Buried Treasure Maps and Buried Treasure. Let's explore how to find Buried Treasure in Minecraft. Subscribe Steps to Find Buried Treasure 1. Find a Shipwreck First, you need to find a shipwreck in Minecraft. A shipwreck looks like the ruins of a sunken ship and is found in Ocean, River and Beach biomes. Shipwrecks usually spawn underwater, however in rare cases, you may find a shipwreck on land in a Beach biome. This is what a shipwreck looks like: 2. Look for a Map Chest Each shipwreck can have up to 3 chests, depending on the size of the shipwreck - Map Chest, Treasure Chest and Supply Chest. To find the Buried Treasure, you will need to look for the Map Chest in the shipwreck. Open the Map Chest and move the Buried Treasure Map to your inventory. 3. Use the Buried Treasure Map Next, use the Buried Treasure Map to find the location of the Buried Treasure. The white dot shows your location and it also indicates the direction that you are facing. The red X shows the location of the Buried Treasure. As you move closer, the map detail will fill in. 4. Find the Buried Treasure Location Once the white dot is at the same position as the red X, you are above the Buried Treasure. 5. Dig until you Find the Buried Chest Start digging until you find a chest. This could take a while depending on your luck. Dig until you find a chest that looks like this: 6. Open the Buried Chest Now open the chest and move the Buried Treasure to your inventory. Congratulations, you just learned how to find Buried Treasure in Minecraft. Buried Treasure Seeds You can use a seed to create a world where you spawn near a Buried Treasure: Hello gamers! Ready for some hardship? If yes, then hop on the boat to sail through the Minecraft Treasure map to get hidden treasures. Don't worry, it won't be tough to find one because we are making this guide super easy for you and just following simple instructions you can find your way through the desired destination. So, keep reading because it's going to be a fun adventure! Minecraft Treasure Maps are not something extraordinary, it's just a regular map with few things that shows, where you are currently, where you can locate the buried treasure, and most importantly, biomes around the treasure. As we discuss, how exactly does it work? It works normally just like an ordinary map indicating direction such as north at top, south at bottom, west on the left side of the map and east on the right side of the map. The circle in the bottom left shows your location and the Red Cross Mark shows the location of buried treasure on a map. To use the map in Minecraft, you need to understand in which direction you are facing. In the Java edition, you can just simply press F3 to see in which direction you are. But in the Bedrock edition there's no such function to show your location and it also indicates the direction that you are facing. You can also discover direction by watching sunrise and sunset because in Minecraft world the Sun rises in the east and sets in the west. As mentioned before you will see a Red Cross Mark in the bottom left of the map that will indicate the treasure location. So, to discover the treasure you need to go towards the North and then East from the place you are located in your Minecraft world. As we already discussed everything related to using maps and how to find X in Maps, now we are going to help you to find the treasure by simple procedure. Just follow these steps and you will be closer to your destination. First to start with the treasure hunt, you keep moving in one of the directions indicated on the treasure map. When you're following the right way, the map will show the different areas around you. Just keep on looking at the picture to see how it works for you. Secondly, once you are there with one side of the X on the map, start moving in the other direction. If you are moving the right way, you will discover your position marker moving closer to the X, and more areas on the map will start appearing in front of you. Keep moving until you are right at the top of the X. Now, it's finally time for you to dig in and around the X on the map. Mostly, the treasure is buried under the sand on a beach or underwater. But sometimes, it could be seen on a hillside or even under the ocean. And after you get your hands on it, just simply open the chest and take all your rewards for hardship. So, now you are finally done with all the work to find the treasure in Minecraft and now you can call yourself a real pirate! Have any more questions? Don't hesitate to comment down and we will be happy to help you! Here is everything you need to know when finding a treasure using a treasure map in Minecraft! Minecraft is a sandbox game developed by Mojang Studios. The game is made out of blocks, square creatures, and also a community. Here, you can either focus on surviving the night or building a work of art – the choice is all yours. However, if the thought of stranding yourself in an unimaginably vast world feels a tad bit overwhelming, then fear not, you can also bring your closest friends on your adventure as well! Read More: Where to Find Rollers In LEGO Fortnite Minecraft, unlike most other games, has no set goal and can be played in whichever manner you like. There are almost limitless things to do, numerous things to find and discover, and a million ways to play this sandbox game. Minecraft even gives you the choice between two modes. In Survival Mode, you're tasked with surviving and thriving in the world of Minecraft, and in Creative Mode, you can build whatever your heart desires. Treasures maps are an item in Minecraft that marks the location of a nearby treasure. However, because of the vastness of the world of Minecraft, finding the exact spot can be a little daunting if you don't know how to use a treasure map. So if you're on that boat then don't worry, we got you covered. CREDIT: MOJANG STUDIOS If an area is unexplored, then the map will be uncolored and mostly appear tan. However, you can get a rough idea about the terrain based on the map features. A water body will be marked with horizontal orange stripes whereas dry land is marked with a flat tan color. Thankfully, the top of the treasure map is the north, left is west, right is east and down is south. So all you need to do is align yourself to the north of your Minecraft world and you'll get a rough idea of which direction you should head towards. CREDIT: MOJANG STUDIOS The second thing to be aware of is the player dot. The white circle you will see on all of the sides represents your current location. One clue as to whether you're headed in the right direction is the size of the dot. As the size reflects how far away you are from the borders of the map. If you notice that your dot is getting larger in size when you move, that's an indication that you're moving towards the marked location. When the size of the dot stops getting bigger, it means that you're less than 1027 blocks from the edge of the map. Once you're in the vicinity of the map, notice that the area around your dot will start to color in. This just means that you're exploring a previously unexplored place. CREDIT: MOJANG STUDIOS From then on, position your dot, which now looks more like a directional arrow, right on the X spot on the map. Make sure to align the top of the arrow with the center of the X. Then all you need to do is to dig straight down and you should be able to find the treasure in no time! Read More: Where to Find Rough Ruby in LEGO Fortnite Thanks to the large Minecraft 1.18 worlds and their variety of mobs, finding rare loot is one of the most important assets for survival in this sandbox game. Among all these loots, one of the rarest is the buried treasure. Much like pirate stories, you can only find this buried deep in the ground and only if you know how to use a buried treasure map in Minecraft. So, that's what we will cover today. From using the map to making the most out of it, our guide has everything you need to know about the buried treasure map in Minecraft. Having said that, make a Minecraft boat, and get ready for this adventure! We already have a detailed guide on our website to help you find buried treasure in Minecraft. You can use this guide to dive deeper into the treasure hunt. But if treasure maps are your only interest, keep reading! Similar to other in-game maps, a Minecraft treasure map indicates the following things: Player's current location Buried treasure's location Biomes around the treasure So, if you know how to read the indicators on the map, your journey to the buried treasure will be a piece of cake. In terms of functionality, the map has real-world directions. The top and bottom are North and South, respectively. Meanwhile, the map's left side is west and the right side is east. Then, as you can see in the GIF above, there's a white circular mark at the bottom left that indicates your current position. Finally, there is an "X" marked with a red cross, and that's the location of the buried treasure in your Minecraft world. To use a map in Minecraft or the real world, you need to know where you are with respect to the map. More importantly, you need to know in which direction you are facing. If you are on the Java edition, you can press the "F3" key on your keyboard to open up an information panel. You can find the direction you are facing from the left side panel here. If you are on the Bedrock edition, there's no way to bring up an information panel. You can try traveling in random directions until the player indicator moves and faces the treasure in the Minecraft treasure map. Alternatively, you can also use the sunrise and sunset to determine your direction. The sun rises from the East and sets in the West, even in the Minecraft world. As you already know, the treasure on your map is marked by a red cross (X). You also know that the four sides of the map indicate the real-world directions. So now, you simply need to find the geographical position of the X mark with respect to your location. In the above screenshot, the X mark on the buried treasure map is located in the North-East direction from my current location in my Minecraft world. So, North and East are the directions I need to head towards. Now that we know the basics, it's time to use the map to reach the X mark and dig out the buried treasure. Follow these steps to easily use a Minecraft treasure map and reach the spot: 1. Since you have two directions with respect to the treasure in this case), you first need to move in one of these directions. If you move in the right direction, the map will start showing the biomes around you soon enough. Check out the following screenshot to see how it works. 2. Next, after you are parallel to the X mark on one side, it's time to move in the second direction. In the right circumstances, you should now see the white circular marker (your position) moving towards the X and uncovering the rest of the biomes on the map. Keep going until the player indicator is on top of the X mark. 3. Finally, it's time for you to dive down and dig on top of and around the X. In most cases, the treasure is either buried below the beach or underwater. But on rare occasions, you might find it on the side of a hill or even under the ocean floor. Well, once you find the treasure, you can loot the chest and collect rare loot items with ease. And just like that, you're now ready to be the next pirate and use all the treasure maps in Minecraft. And if uncovering secrets is something you genuinely like, the new Deep Dark biome coming in Minecraft 1.19 is sure to impress you. But do make sure to dress the part using one of the coolest Minecraft skins. With that said, if your boat faces any trouble on your quest to find the buried treasure, feel free to reach out in the comments below. Someone from our team will help you on this exploration journey. Buried treasure is a staple of any pirate-based content. While you aren't quite a pirate in Minecraft, you can still find treasure maps, which lead you straight to some valuable buried treasure. Of course, you'll need to do some exploring first. In this guide, we are going to go over how to use Minecraft treasure maps, as well as the loot you can receive from treasure chests. Related Wondering where to get that coveted Blue Axolotl from in Minecraft? This guide tells you everything you need to know. Finding the maps and chests may seem like a long process, but the loot makes it completely worth it. We will show several ways you can find the buried treasure, and without a map, as well as what you can expect to find inside. First, let's look at how to find a treasure map. Updated January 27, 2025 by Jacqueline Zalace: Minecraft has two different versions; Java and Bedrock. While things generally stay the same, there are some differences. These differences can be spotted in the buried treasure loot, so we've updated this guide to display Bedrock loot from these hidden chests. Additionally, we've added just a bit more information to help you find the treasure in question. What's The Difference Between Treasure Maps And Ocean Explorer Maps? There are a few different map types in Minecraft, so it's okay if you get them confused; especially when trying to stumble across one without a map, as they can easily be spotted from above (for example, if you are flying over with an elytra). All map types can be duplicated! Keep this in mind if you find a buried treasure map (or even an ocean explorer map), and want to challenge some players on your server. This is a great way to set up a little mini-game to see who finds the loot/structure the quickest. Buried treasure maps can only be found in shipwrecks and ocean ruins. Shipwrecks are underwater structures that resemble sunken ships. Some shipwrecks may have mobs such as drowned spawning, so it's best to be cautious when exploring. Additionally, shipwrecks will spawn in a variety of different positions. For example, in the image above, you can see a shipwreck on its side stuck in ice. They can also spawn partially on land or buried on the beach. Shipwreck Layouts Inside each shipwreck, there is loot located in the lower section of the ship. The lower section may end up being on the top of the ship if it is overturned, so keep the ship's orientation in mind. If there is a map chest, there is a 100 percent chance it will contain a buried treasure map. Ocean Ruins Similar to shipwrecks, you can find ocean ruins underwater. They are a bit rarer than shipwrecks and can be quite treacherous to navigate. These structures are found in ocean biomes and appear to look like an underwater village. Within the buildings of an ocean ruin, there will be chests filled with loot. You have a 43 percent chance of finding a buried treasure map in these chests. Now that you have the buried treasure map, take a look at it. If you are not standing near the treasure, you will see landmasses outlined, with the ocean filled with orange stripes. As you come closer to the buried treasure, the map will fill in color. In the image above, you can see the map has been partially filled in. Most of the time, you will find these chests on the beach or right off the coast. The treasure will be located at the red X. Although it's rare, you may find a chest in the center of the ocean. If this is the case, be sure to have Respiration and Aqua Affinity enchantments on your armor, so you can reach the bottom of the ocean without drowning. We suggest tackling a treasure map one axis at a time. First move in a straight line following along two of the cardinal directions. While doing so, check the map to see how the dot is moving. There is a chance that the dot may be in the corner, so adjust until it slides up one of the edges. From here, you will need to choose between the two other directions. If you know for sure that an ocean is one way, then head that way. If you are a bit unsure, you could pick at random, but just know that you may be going the wrong way. If you notice a lack of water, consider turning around. Buried treasure will always generate near the center of the chunk. The world is broken into sections called chunks that aren't visible when playing. In the image above, you can see the chunk borders marked in white. The red portion is the center of each edge, with the yellow marking the 2x2 area that is the exact middle of the chunk. Treasure will be near this yellow area. You can easily turn on chunk borders by pressing F3 + G. Doing so will display all chunks. To turn off chunk borders, just press this again. When you get near the X on the map, turn on chunk borders and find the center blocks of the chunk. Dig down until you reach the treasure chest, and gather your rewards. The chunk borders shown will depend on the chunk you are standing in; every border will not be visible at the same time. There may be times when you don't have the patience to look for maps and want to skip straight to the treasure. While this may take a bit longer, it's not impossible. The good news is that buried treasure can generally be found in the same places that maps can, like coastal areas, shipwrecks, and the ocean floor. This includes Beaches, Snowy Beaches, and Stony Shores. However, it can be challenging to know where to start digging since buried treasure won't suddenly appear on the map when you are nearby. Based on the area it's located, the treasure may be covered by blocks matching its surroundings, like sand or gravel. Overall, stick to the beaches, turn on your chunk borders, and look for any bits of extra suspicious-looking sand. The buried treasure chests will have a variety of loot. Below, you can find all potential loot as well as the chances of finding it. We've created one table for Java and one for Bedrock, as the loot is a bit different for each. Java Buried Treasure Loot Item Chance to Find Heart of the Sea 100% Iron Ingot 99.4% Gold Ingot 88% Cooked Cod 75% Cooked Salmon 75% Potion of Water Breathing 66.7% TNT 62.7% Emerald 59.9% Prismarine Crystals 59.9% Diamond 59.9% Leather Tunic 25% Iron Sword 25% Bedrock Buried Treasure Loot Item Chance to Find Heart of the Sea 100% Iron Ingot 57.2% Chainmail Helmet 57.2% Chainmail Chestplate 57.2% Chainmail Leggings 57.2% Chainmail Boots 57.2% Potion of Water Breathing 46.9% Diamond 46.9% Gold Ingot 34.3% Lead 34.3% TNT 34.3% Name Tag 34.3% Potion of Regeneration 34.3% Prismarine Crystals 18.9% Book and Quill 18.9% Mellohi Music Disc 18.9% Wait Music Disc 18.9% Bottle o' Enchanting 11.8% Cake 4.1% Both Java and Bedrock versions of buried treasure will guarantee you one Heart of the Sea. As mentioned before you can have a pretty good chance of finding every treasure. If you are playing on a server with others, there may be a chance that the chest has been looted already. If the area looks dug up, chances are, someone beat you to it. Sometimes, it may be difficult to tell if someone has already looted the chest. Fortunately, every buried treasure contains a Heart of the Sea. This means that if it is gone, someone has already looted the chest. Buried treasure chests are the only place that you can find the Heart of the Sea. At first, these may not seem too important, but don't get rid of them! A Heart of the Sea is incredibly rare and can be used to craft a conduit. Conduits are crafted structures that provide a variety of underwater buffs, similar to beacons. With a conduit nearby, you will have water breathing, night vision, and haste while underwater. Additionally, conduits will attack hostile mobs that are nearby. To make a conduit, you will need the following materials. 1x Heart of the Sea 8x Nautilus Shells Combining these items will give you a placeable block. After making a shape like the one shown above, which serves as the frame, place the conduit in the center. This will cause it to activate. Conduit Layout Above, you can check out a gallery of images that take you step by step through the process of making a full conduit. Place down an 'X' made out of Prismarine blocks, with each line being five blocks (two coming out of each side from the center block. At the end of each 'arm', place four blocks going upward. In total, each side should have five vertical blocks. Place a second 'X' on top of the vertical blocks. At this point, you will only need to place down five blocks to get this done. On each side, place an 'L' shape of Prismarine blocks that look like a band going around the center. Lastly, place the conduit in the center. It should be one block off the base Prismarine; you can use any temporary block to work as a platform. After putting down the conduit, be sure to remove it. This conduit has been built on dry land so it's easier to see; in this game, it needs to be underwater. How To Obtain Nautilus Shells Nautilus shells are also a bit difficult to obtain. You can purchase them from the Wandering Trader for five emeralds; however, they will only sell you five. Wandering Traders are a type of villager that can visit your base with a variety of goods. They will spawn within a 48-block radius of you, granted you are in an area where mobs can spawn. If you are working on a part of your base for a long period of time, there is a good chance that a Wandering Trader will appear. Drowned mobs have a three percent chance to hold a shell (eight percent on Bedrock edition) and will always drop it upon death. Lastly, nautilus shells can be obtained by fishing, but they are a rare item and will take some time to fish up. Next When it comes to conquering structures in Minecraft, an Ocean Monument is one of the largest, so follow our step-by-step guide on how to do it. Hello gamers! Ready for some treasure hunt? If yes, then hop on the boat to sail through the Minecraft Treasure Map to get hidden treasures. Don't worry, it won't be tough to find one because we are making this guide super easy for you and just following simple instructions you can find your way through the desired destination. So, keep reading because it's going to be a fun adventure! Minecraft Treasure Maps are not something extraordinary, it's just a regular map with few things that shows, where you are currently, where you can locate the buried treasure, and most importantly, biomes around the treasure. As we discuss, how exactly does it work? It works normally just like an ordinary map indicating direction such as north at top, south at bottom, west on the left side of the map and east on the right side of the map. The circle in the bottom left shows your location and the Red Cross Mark shows the location of buried treasure on a map. To use the map in Minecraft, you need to understand in which direction you are facing. In the Java edition, you can just simply press F3 to see in which direction you are. But in the Bedrock edition there's no such function to show your location and it also indicates the direction that you are facing. But in the Bedrock edition there's no such function to show your location and it also indicates the direction that you are facing. You can also discover direction by watching sunrise and sunset because in Minecraft world the Sun rises in the east and sets in the west. As mentioned before you will see a Red Cross Mark in the bottom left of the map that will indicate the treasure location. So, to discover the treasure you have to move forward or go in different directions and an indicator will let you know where's treasure is buried in the map. So, to discover the treasure you need to go towards the North and the East from the place you are located in your Minecraft world. As we already discussed everything related to using maps and how to find X in Maps, now we are going to help you to find the treasure by simple procedure. Just follow these steps and you will be closer to your destination. First to start with the treasure hunt, you keep moving in one of the directions indicated on the treasure map. When you're following the right way, the map will show the different areas around you. Just keep on looking at the picture to see how it works for you. Secondly, once you are there with one side of the X on the map, start moving in the other direction. If you are moving the right way, you will discover your position marker moving closer to the X, and more areas on the map will start appearing in front of you. Keep moving until you are right at the top of the X. Now, it's finally time for you to dig in and around the X on the map. Mostly, the treasure is buried under the sand on a beach or underwater. But sometimes, it could be seen on a hillside or even under the ocean. And after you get your hands on it, just simply open the chest and take all your rewards for hardship. So, now you are finally done with all the work to find the treasure in Minecraft and now you can call yourself a real pirate! Have any more questions? Don't hesitate to comment down and we will be happy to help you! So, you've been playing Minecraft and found yourself a buried treasure map. It's a bit mysterious because you don't know what you're going to find with this map, or even really how to use the darn thing. Not to worry, friend, we've got everything that you need to know about buried treasure maps in Minecraft. So, put on that Captain Jack Sparrow hat and let's get to work on that treasure map! What is the buried treasure? It will be a chest that contains five items for you. If you're reading this just now and had no idea that buried treasure maps were even a thing in the game, then your mind is probably racing wondering how the heck you can get your hands on one. You're not going to believe how easy it is to find a buried treasure in the game. To look for them, you need to look in underwater ruins chests and shipwreck chests. That's it – those are the two locations in Minecraft where you have the chance of finding a buried treasure map. But not all chests in those two locations will have the treasure maps. You'll know you've found one of the treasure maps when you see something that looks like yellowish paper as the small icon (see image below). That's your path to the treasure. As you can see in the image above, the chest had a map that was moved to inventory. I know it doesn't really look much like a map, but trust me, that is the map you seek. How To Use A Minecraft Buried Treasure Map Okay, now that you've found a chest containing a buried treasure map, you're halfway there. It's not time to set out on a quest to discover this treasure. So, you need to equip the treasure map in your hotbar, and then select it. That brings that map up to a larger size so that you can more easily follow it to the rich stuff. Just know that if you have something like a shield also equipped, then you map will show up slightly smaller than normal. As with any good buried treasure map, X marks the spot. So, you just have to work your way through the world until you reach that big red X on the map. Not sure where you're starting from on this map? Well, your current position should be marked by a white cross. Of course, your current position might not be marked somewhere off the map. In this instance, you'll see yourself as a white dot somewhere on the edge of the map. If this happens to you, then you need to start walking in the opposite direction in order to show up on the map. For instance, if your white dot is found on the northwest corner of the map, then start walking in a southeast direction to get on the map. I know that sounds kind of confusing, but that's just the way that it works. How To Dig For Buried Treasure In Minecraft Okay, so once you have maneuvered your way through the lands to get to where that big red X marks the spot, it's time to dig up that buried treasure. That's right, the treasure is literally buried and you have to dig to uncover it. The tricky part is that red X is not an exact location, so you'll have to dig over a wide area in that general vicinity to uncover the hidden loot. Usually gravel or sand is what you'll have to dig through – but it may be a more durable material. What is the buried treasure? It will be a chest that contains five items for you. In fact, to find the treasure? It will be a chest that contains five items for you. In fact, to find the treasure? It's usually something like a depth of several blocks. When you see the chest, you need to roll up your sleeves and dig it out. So, you need to equip your shovel or pickaxe, depending on whether it's gravel or sand, and start digging. You'll want to keep in mind that when you dig down on that spot, dig a 3x3 area around it, and you should be able to uncover the chest. Uncovering the chest in Minecraft Bedrock Edition There are two ways in which players can unearth a buried treasure in the Bedrock edition. The first one is quite simple: players need to place the pointer needs to do is move forward to dig 3x3 holes right under their feet. The second method, though not complicated, uses basic mathematics. Similar to the first approach, line the pointer at the center of the X. Then, make sure that the X and Z coordinates are even numbers. Here is where the math part comes into play. Divide those numbers by 8. If the answer comes up to a whole number for both coordinates, dig straight down on that block to find the chest. If there is a decimal present, move around to nearby even coordinates until the answer sums up to a whole digit. Digging down on these coordinates will lead to the buried treasure. About the author Quick Links Edited by Dinesh Renthlei
