AirDroid Cast is software specially designed for various users (Android/iOS/Win/Mac), which can mirror your screen to a PC. Now AirDroid Cast supports web browser screen mirroring! You can mirror the screen of your mobile phone to your browser without installing.This is useful for many teachers when they want to directly share notes they made on their phone, rather than transferring them on their laptop and then clicking a hundred times to display that information again. How to screen mirror your phone/PC onto a browser? Let's find out! Often people tend to feel the need to share their screens in the office or school, at home, or with friends. Also, sometimes the software you might be using may not be that fast. Therefore, AirDroid Cast was created to eliminate all the limitations of the everyday user. AirDroid cast serves as a screen mirroring web browser. It's software designed to mirror your phone screen on the laptop or desktop computer for easy sharing and feasible communication. AirDroid Cast was designed while keeping in mind the necessities of businesses in the coronavirus pandemic. The pandemic has lasted for years, but the businesses can't stop. Thus, it was necessary to design software to allow you to share your screen while working or taking classes quickly. Don't worry when you're out and about on a vacation and your boss calls, AirDroid Cast is super fast as it takes minimal time to load up on your desktop screen. Also, it is effortless to connect your PC with your Android or iOS phone. You can cast your screen of mobile phone into your laptop or web browser.AirDroid Cast helps you attend meetings and classes much more efficiently; with its simple QR Code feature, you can easily use your mobile phones to be connected to convert your desktop into a web browser screen mirroring tool. This is useful when you have all of you on the go and don't have access to a desktop, and your boss urgently wants you to present an outstanding idea.AirDroid Cast will make sure you don't disappoint, and it'll make sure your presentation goes impressive. 2. Best Tool for Teachers The best feature about AirDroid Cast is that it's useful for purposes, including group learning, teachers, and students individually. When used to explain different topics, AirDroid Cast can work as a screen mirroring website free of cost, allowing students to learn more effectively and giving you the feasibility you need while teaching. Also, this software will help teachers to conduct online classes feasibly and efficiently. you can turn your Android or iOS device into a handy whiteboard by using AirDroid Cast. You can type down key points or draw the formula right onto your device and share the screen to the computer. It also allows communication between the host and the attendee, reducing communication gaps by using two-way audio features. 3. A True Screen Mirroring ExperienceUsing AirDroid Cast brings you many benefits other than your professional life. Using AirDroid Cast can also be very useful for using your laptop as a screen mirroring web browser, allowing you to share your experiences with multiple people with the help of a single QR Code or a numeric code. It allows you to screen games on a big screen. This is useful if you're among your friends and want to play online games that you all can see and share. It also enables you to watch movies together, play games, and learn, a complete experience in a single software. 4. Browsing Made More Fun Using AirDroid Cast, you can easily browse the internet and display it on your PC Screen. Your laptop becomes a web screen mirror and allows you to visit your phone screen on the browser. If you ever want to read an article and do some research on your phone, click on AirDroid Cast and start mirroring your web browser. This will also enable you to control your phone using your laptop very quickly.Using AirDroid Cast to cast to browser is simple; follow these steps, and you'll be set up in no time! Step 1.First, you need to install AirDroid Cast on your mobile phone. You can download it from AirDroid Cast official website or simply click “Download Now” button below.Step 2.After installing, open a web browser as screen receiver and go to webcast.airdroid.com. Using your phone to scan the QR code on your screen. Once you have connected your phone, you will be able to see your phone on the browser in front of you. Now you can start screen mirroring! Note : [Don’t Miss] More connection methods of AirDroid Cast,let’s Read! AirDroid Cast allows you to achieve screen mirror using four different procedures; Wi-Fi and Remote connection, Airplay and using USB Cable. All four have their perks. Wi-Fi and Remote connection are very simple. You only need to enter the cast code or scan QR code by using the AirDroid Cast on Android/iOS or Windows/Mac to cast the screen wirelessly through Wi-Fi or remote network in your computer. Then, you can easily share your phone screen on computer. You can also control your phone screen on your PC. This is useful if you're attending online meetings or hosting online meetings. This allows multiple devices to be connected to a single screen. Next is Airplay. This is especially useful if you're connecting an iOS device. Usually, you can connect iOS devices easily with the associated iOS devices such as Mac book. Four comes the USB connection. This is like connecting any other phone with your laptop, but it allows you to mirror your phone's web browser on your computer. This is comparatively faster and gives you a clearer image.How to Connect your iOS Devices with AirDroid Cast?The limitation of users not being able to screen mirroring iOS devices to Windows has now been solved! The Screen Mirroring feature in your iOS can now work with AirDroid Cast.Just follow these simple steps to connect your iOS device and enjoy surfing! Step 1.Open your laptop and open AirDroid Cast. Select the Airplay option on the top panels. Step 2.Next, you need to open your iOS device, go to the control center, and select the "Screen Mirroring" option. The laptop will become an Airplay Receiver, thus allowing you to connect your phone with your laptop. (Note: The methods of WLAN and USB cable connection is also applicable to iOS. You can choose one that suits your needs.) Step 3.Then, select your laptop from the Screen Mirroring list. Voila! Your laptop is now your screen mirroring browser. Now you can enjoy surfing on your laptop. AirDroid Cast is a mirroring software that helps you convert your PC screen into a screen mirror. This helps you project your phone on the screen and use it. It has multiform uses, such as for people in businesses who want to attend calls, for teachers who want to explain to students using a virtual whiteboard, and for a group of friends who want to connect and play online games together on their phones. AirDroid Cast has its uses everywhere, in every aspect of life. This software considered every individual's limitations during the pandemic and used it to give you what you need, regardless of the pandemic. Chromecast’s ability to stream movies, TV shows, music, and more from any TV is pretty cool. You can also Cast from your computer to your TV. You can also turn your TV into a giant monitor that you can control from your computer or mobile device. You can Cast your phone screen, a browser tab from your computer, or media from your device to your TV. If you’re looking for how to set up a basic Chrome Casting, here’s Google’s guide. This post will show you, step by step, how to Cast directly from a Chrome tab to any device you want. What is Chrome Casting a tab good for? Casting a tab from Chrome is useful when you want to Cast mainly static content, like photos from Dropbox, OneDrive, or Google Drive. It’s also good for viewing a website at a larger scale without the pixelation and rescaling you encounter when you zoom in. If you want to display a presentation on a larger monitor, Chromecasting a tab a great choice. What is Chrome Casting a tab not good for? Casting a Chrome tab doesn’t work well for some videos. Some video sites, like YouTube, support Chrome Casting and work great. Chromecast grabs the content directly from the internet and treats the tab as a remote control for the TV. In fact, it stops Casting the tab, which can sometimes cause problems (more on this below). But when you’re using something like Vimeo, DailyMotion, or Amazon Prime Video, it doesn’t work well because these sites don’t plug seamlessly into the Chrome ecosystem. Instead of streaming content directly from the web to your TV, you’ll be streaming it through your computer and then from the Chrome tab to your TV. Depending on your computer and internet connection, that additional layer is a recipe for glitches and other issues. You can get around this by using the mobile app for the streaming service you’re trying to use. These apps often have native Chromecast support, eliminating the problem. You can also choose to Cast media rather than the entire tab. What do you need to Cast a Chrome tab? To make this work, you’ll need the following: 1. Chromecast on your TV Without this, your browser won’t be able to find anything to Cast to and your TV won’t be able to receive the content you’re Casting. You can use either a Chromecast dongle or a TV with Chromecast built in. If you’re using the Chromecast dongle, plug the dongle into one the HDMI ports on your TV. 2. Chrome You can Cast a tab directly from your browser but that browser has to be Chrome. You can’t Cast to a Chromecast from Edge, Firefox, or any other browser. If you’re having trouble, make sure Chrome is updated. 3. Wifi Chromecast and Chrome communicate over wifi, so you need them both connected to the same wifi network. You can use the Chromecast extension for Chrome, and it does make things easier, but you don’t need it. Chrome Casting is supported natively inside Chrome. 4. A compatible device You can Cast from any desktop, laptop, or Android device that meets the system requirements below. You can’t Cast a Chrome tab from an iPhone or iPad, though you can Cast media from those devices. Your device should meet this minimum requirements: Windows: Windows 7 or above, Core i3 processor or above Mac: Macbook Pro 2011 or Air 2012 or later, OS X 10.9 or above Chromebook: Works better on Chromebooks from 2014 and later, but no minimum requirements Linux: Too variable to define What can you Cast? You should be able to Cast pretty much any web content. TV shows, YouTube, web pages, presentatios, and anything that shows in Chrome. There are some exceptions. Some plugins don’t work reliably when you Cast a tab. These include Microsoft Silverlight, Quicktime, and VLC. Since some streaming services rely on Silverlight, they might not work at all—and Casting media rather than a tab won’t solve that problem. Other than YouTube, many video sites don’t work consistently Chromecast. If you can’t download the video files and Cast them from your computer, you can try Casting from a mobile device. Proprietary web streaming services often have apps that support Chromecast even if their desktop players don’t work well. Ready with the content you want to Cast? Let’s get started. Chromecast from Your Computer This works more or less the same for PCs, Macs, and Linux machines. First, open the Chrome menu (the three dots next to your profile picture) and choose Cast from the dropdown menu. Choose the Chromecast you want to Cast to The dropdown will offer you a list of potential Cast targets. Choose your Chromecast. You’ll begin Casting right away. If not, switch the HDMI channels on your TV until it appeears. Pinning the Cast button to the toolbar in Chrome You don’t have to do this, but if you plan to Cast a lot, it’s a nice hack. Once you’ve opened the Chrome menu and selected Cast, you’ll notice the Cast button appears in your toolbar. But if you’re going to Cast a lot, it’s better to keep it there permanently. You can do that by right-clicking it (CMD-click on a Mac) and selecting “Always show icon.” Cast video or other media You can Cast video from a tab by clicking the Cast symbol in the toolbar. The video’s soundtrack will play on both your TV and your computer. All other sounds from that tab will play only from your computer. Chrome will default to Casting the content within a tab, not the tab itself. It will Cast the video out of a tab without the surrounding graphics, HTML, and so on. Most of the time, that’s good. Why Cast a web page over to your TV if you don’t have to? But it also means that not everything in the tab will make it over to your TV. Subtitles in YouTube videos and other additional material might not get displayed. There used to be a more complex Chromecast control system giving you the option of switching between Casting the whole tab and Casting its contents. That’s been removed unfortunately. There’s a fix involving the use of Chrome Flags. From your browser’s omnibar: Go to chrome://flags/#views-cast-dialog and Disable it. Go to chrome://flags/#upcoming-ui-features and Disable it. You should now have access to the full controls that allow you to Cast the whole tab. Stop Casting from your computer When you’re done, you can stop Casting by clicking the Cast symbol on the right of the omnibar and selecting “Stop” from the menu. Chromecast from Android Open Settings and select Connected Devices > Cast, then select your Chromecast from the menu. The Chrome tab on your Android screen will display on your TV. From there, you can: Cast media from Android Click Cast on the video you’re watching and it will be displayed on your TV. You can find the Cast button in different places, depending on what you’re using to watch media. For example, it’s at the top of the Home screen in the Android YouTube app. Choose the Chromecast you want to Cast to, tap Play, and your media will be displayed on your TV. To stop Casting media, click Cast again. Stop Casting on Android Go to Settings > Connected Devices > Cast and select your Chromecast, then tap Disconnect and your TV will stop showing content from your Android screen. Chromecast from an iPhone or iPad You can’t Cast a tab from iPads or iPhones, but you can Cast media. All you need to do is tap Cast on the media you’re watching. To stop Casting, tap Cast again and select Stop. Cast from Files on Your Computer If you can download the files you want to watch, you can Cast those from your computer too. To do that: Open Chrome and select Cast, then click the down arrow next to “Cast to” Select “Stream a video or audio file,” then “Cast file.” Choose the file you want to Cast, then the Chromecast device you want to Cast to. Having trouble casting? If you can’t find the Cast button on your desktop or laptop, try these steps. First, make sure Chrome is up to date and that your computer and your Chromecast device are connected to the same wifi network. Next, see if the Cast button is in the overflow area. This is the space Chrome sets aside for extensions if you have a ton of them. Click the Settings menu and see if you can find the Cast button in there. No luck? Try quitting Chrome entirely and restarting it. You can also try restarting your entire computer.
