Agriculture management system project documentation

A project proposal for an agricultural information management system was submitted by Jackline Wairimu Maina and John Mburu Kariuki to fulfill the requirements of their Bachelor's degree. The document has been viewed 1K times with 59 pages worth of content. Their project, aimed at helping farmers sell produce online and connect buyers directly, also provides best practices for farming. It's available for download in various formats. Another view of this system is presented in a separate document, highlighting its ability to help farmers and provide effective management strategies. Lastly, a project report outlining the development of an Agriculture Management System was submitted by students towards their Bachelor of Engineering degree. The main goal of this system is to assist farmers with their daily operations.
