Cars are taxed according to the weight of the car and the size of the engine the larger and more powerful the car, the higher the fees. The best place to view vehicle advertisements is on FINN.no, under Bil. There you can find all types of vehicles for sale from both private individuals as well as car dealerships. To purchase brand-new cars, you can contact the car dealerships in your area. It is possible to negotiate the prices on the vehicles with both private individuals and car dealerships. Note that one needs to have a Norwegian Personal number to register a car in Norway and/or to get a car loan. You can get a loan from your bank or through the car dealership agent. Be sure to check the different interest rates available. When a vehicle changes ownership, the change must be reported to Statens Vegvesen (Norwegian Public Roads Administration). This should be done within 3 days of the change of ownership. Both the previous and the new owner, and any co-owners, must sign the same notification of sale. The previous owner is responsible for submitting the notification of sale to the Norwegian Public Roads Administration. The vehicle registration certificate consists of two parts. Part 2 must be submitted in connection with a change of ownership. Part 1 is a document that follows the car. Part 2 must be kept separately from the vehicle. On re-registration, the buyer receives a temporary registration certificate. This document must be kept by the buyer until he/she receives the new registration certificate by post. NOTE! It is not permitted to drive in another country with a temporary vehicle registration certificate. Motor vehicle liability insurance must be taken out with an insurance company. When Statens Vegvesen has received the notification of sale, the new owner will receive a bank giro for the re-registration fee. To re-register your vehicle, both the Annual Motor Vehicle Tax and the re-registration fee must be paid. You pay road traffic insurance tax via your car insurance. To re-register your vehicle, you must present valid identification to Statens Vegvesen (Norwegian Public Roads Administration). Car Maintenance What do you need to know about maintaining your car in Norway? rsavgift (Annual fee) After 2017 you no longer have to pay annual vehicle tax. Instead you pay a traffic insurance tax via your car insurance starting 1 January 2018. Vehicle Card (Vognkort) It is compulsory to have your drivers license and the vehicle's vognkort when you are driving. The vehicle's owner information, vehicle information and technical information are listed on the card. If you do not have this vognkort, you will need to inform Statens Vegvesen. Click here for the form. EU Inspection Check when your car needs to be sent for its EU-inspection here. The EU Inspection is a biennial (once in 2 years) check of your vehicles safety and environmental features. Note that only approved car workshops (they will usually have an external sign stating if they are approved by the Statens Vegvesen or not. If in doubt, contact Statens Vegvesen to check.). NAF and other special control stations can perform an EU Inspection on your vehicle. More information about EU Inspections can be found here. Insurance (the bare minimum) is mandatory for all vehicles in Norway. You can select how much insurance coverage you would like to have for your vehicle. Be sure to check out different insurance companies as the prices can differ by quite a bit. Changing Tyres It is the vehicle owner who needs to evaluate if the tyres on the vehicle need to be changed or not. Studded tyres may be used from November 1st until the first Sunday after Easter. If studded tyres are fitted there is a charge (in Oslo, Bergen and Trondheim). Stickers are available for purchase daily, monthly or yearly. From October 15th until May 1st you are permitted to use studded tyres in Nordland, Troms and Finnmark. There are no restrictions for using non-studded winter tyres all year round. However, the disadvantage of using non-studded winter tyres in the summer is that the tyres will not have the same stability, lateral grip and braking ability that they will have in the winter. This is partly because the air temperature is much warmer in the summer, and asphalt has a higher temperature than in the winter. Requirements for the tread depth on tyres For summer tyres, the minimum requirement for tread depth is 1.6 mm. (NAF recommends a min. of 3 mm) For winter tyres, the minimum requirement for tread depth is 3 mm. (NAF recommends a min. of 5 mm) Before you start checking your car inspection online, make sure you have the following information readily available: Your vehicle's license plate number The last four digits of your Vehicle Identification Number (VIN) Having this information on hand will ensure a smooth and accurate inspection process. Step 2: Visit the Official Government Website To initiate the car inspection check, you need to visit the official government website dedicated to vehicle inspections. Each country or state may have its own dedicated website, so make sure you access the relevant site for your location. Step 3: Locate the Inspection Status Check Once you are on the official government website, look for the Inspection Status Check feature. This is usually found in the Vehicle Services or Driver Services section of the website. Take your time to familiarize yourself with the layout and navigation of the website, ensuring you can easily locate the necessary tools. Step 4: Enter the Required Information Click on the Inspection Status Check link, which will redirect you to a page where you can enter the required information. Fill in the requested fields, including your vehicle's license plate number and the last four digits of your VIN. Step 5: Submit and Wait for Results Once you have entered your information correctly, click on the Submit or Check Status button. The website will now process your request and retrieve the relevant information. This process may take a few moments, so be patient and avoid refreshing the page. Step 6: Review the Inspection Results After the website has processed your request, it will display the inspection results on the screen. Carefully review the information provided. The results will typically indicate whether your car has passed or failed the inspection, along with any additional details or requirements. Step 7: Take Appropriate Action Based on the inspection results, you may be required to take certain actions. If your car has passed the inspection, congratulations! Ensure you keep up with regular maintenance to maintain your vehicle's condition. However, if your car has failed the inspection, it's essential to address the issues mentioned. Take note of any repairs or maintenance required and schedule an appointment with a certified mechanic or the appropriate authority. Remember, maintaining your vehicle's inspection status is crucial for your safety, the safety of others, and to comply with legal requirements. By following this step-by-step guide, you can easily check your car's inspection status online, ensuring your vehicle remains in top shape. How helpful was this article? This page has been viewed 18 times It is important that you check the inspection sheet even if your vehicle passed the mandatory roadworthiness test ("EU test"). If your vehicle passed the test, you may continue to use it as before. The vehicle has passed the test if no defects and deficiencies were found, or if the inspection sheet specifies deficiencies with Code 1. You can find inspection sheets from mandatory roadworthiness tests carried out during your ownership period by logging in. Log in and select vehicle Check the inspection sheet The garage enters the result of the roadworthiness test in our systems, but it is important that you check the following on the inspection sheet: any defects and deficiencies with Code 1 that the correct odometer reading has been registered the deadline for your next mandatory roadworthiness test Remember that the mandatory test is not a complete survey of the condition of a vehicle. If you plan to buy or sell a vehicle it is a good idea to have the vehicle more closely inspected. See out tips for buyers and sellers. Was your vehicle found to have deficiencies with Code 1? You will then have to have the defects fixed as soon as possible, but it is not necessary to present the vehicle for reinspection. Examples of such deficiencies can be that there is no reflective vest or no warning triangle in the vehicle. Would you like a reminder of your next mandatory roadworthiness test? You can receive notifications when your next test deadline is approaching if you download the app Bil og henger (Norwegian only). NB! It may be that the notifications you receive through the app are wrong, even though the deadline displayed is correct. The introduction of new rules for mandatory roadworthiness tests from 8 February 2019 means that you will have a shorter deadline than what the app notification shows, if you take the test more than two months before the deadline and the vehicle does not pass the test. Remember that it is your own responsibility to check the deadline for the vehicles you own and make sure they are tested and approved before the deadline. Own and maintain As the owner of the car it is your responsibility to see to it that your vehicle is tested for roadworthiness. We use some essential cookies to make this website work. Before we dive into how to tell if your car has passed inspection, let's first understand what vehicle inspection involves. Vehicle inspection is a process mandated by authorities to ensure that vehicles meet certain safety and emission standards. This process is conducted by certified inspectors who thoroughly examine your car for any potential issues or violations. Checking the Inspection Sticker The most obvious indicator that your car has passed inspection is the inspection sticker. After a successful inspection, a sticker is typically placed on your windshield or license plate. This sticker serves as proof that your vehicle has met the necessary requirements and is safe to drive. In most cases, the sticker will indicate the expiration date, allowing you to keep track of when your next inspection is due. Reviewing the Inspection Report Another way to determine if your car has passed inspection is by reviewing the inspection report. During the inspection, the certified inspector will conduct various checks and tests on your car. The detailed report will outline all the areas inspected, any issues found, and whether your vehicle met the required standards. If your car has passed inspection, the report will indicate that no violations or failures were detected. No Follow-Up Notices If your car has passed inspection, you can be confident that no follow-up notices will be sent to you. In some cases, if your vehicle fails to meet certain standards, you may receive a notice requiring you to address the identified issues within a specified time frame. However, if no such notices are sent, it's a clear indication that your car has passed the inspection successfully. No Dashboard Warning Lights Dashboard warning lights can be an indicator that something is wrong with your vehicle. If your car has passed inspection, you should not see any warning lights illuminated on your dashboard. These lights are designed to inform you of any potential issues or failures that could affect the safety or performance of your car. Therefore, if your vehicle has passed inspection, it should be free of any warning lights. The Benefits of a Passed Inspection Passing a vehicle inspection is essential for several reasons. First and foremost, it ensures your vehicle is safe to drive, minimizing the risk of accidents or breakdowns. Additionally, a passed inspection helps to maintain your car's value, as potential buyers are more likely to be attracted to a vehicle with a recent inspection. Furthermore, passing the inspection enables you to comply with local laws and regulations, avoiding any penalties or fines for driving without a valid inspection. Increased safety on the road Maintained vehicle value Compliance with legal requirements Peace of mind while driving In conclusion, passing a vehicle inspection is crucial for your safety, legal compliance, and peace of mind. By checking the inspection sticker, reviewing the inspection report, and ensuring no follow-up notices or dashboard warning lights, you can confidently determine if your car has passed inspection. Regularly scheduling and passing inspections will not only keep you on the right side of the law but also ensure your vehicle is in optimal condition for a smooth and worry-free driving experience. How helpful was this article? This page has been viewed 59 times Vehicle Information is an open service on the Norwegian Public Roads Administration's website where anyone can find information about a vehicle. Odometer readings (kilometres travelled) can be found when you log in to Your Page. Vehicle Information includes the status of mandatory roadworthiness tests (EU tests), make and model, dimensions and weights, emissions data, engine type, engine power, fuel type, etc. You can also find the date of registration and first-time registration. We collect this information from the National Vehicle Register. To find information about a vehicle, you need a registration number, a Vehicle Identification Number (VIN), or a personalised plate number. The facility also provides a link to Your Page where you can log in with BankID and find the owner of the vehicle as well as its odometer readings. Restricted number of searches and availability The information may be up to 24 hours late if someone else has recently searched for the same vehicle. You cannot search for more than 30 vehicles per hour from the same IP address. This restriction is meant to ensure that our systems are available to other users and case officers. Please contact us if the information is incorrect If you believe that the information is incorrect or not in accordance with the Vehicle Registration Certificate, please contact your nearest Driver and Vehicle Licensing Office (traffikkstasjon) so that we can check the vehicle more closely and update the data in our register as required. You need to book an appointment before you go to a Driver and Vehicle Licensing Office. If you have technical questions about using the facility, please contact us so we can help you. How to find the owner of a vehicle The name of the owner of a vehicle will not appear on our web pages, for privacy reasons. To check who owns a vehicle, you can log in to Your Page or use our SMS service. Odometer readings available on Your Page To see what odometer readings have been reported to the Norwegian Public Roads Administration for a vehicle in the connection with a mandatory roadworthiness test, you need to log in to Your Page. Odometer readings are no longer openly available because they are considered personal data. How odometer readings are reported At each mandatory roadworthiness test, the garage (testing centre) reports the odometer reading to the NPRA, as displayed at the time of the inspection. You should check that the odometer reading the garage has written on the inspection sheet is correct when you collect your vehicle. The Norwegian Public Roads Administration does not check that the reporting is correct, we only show data we have received from the garages. The facility may display multiple odometer readings registered on the same day or within a short period of time. This is because the garage must report mandatory roadworthiness tests and re-inspections separately, and each time the vehicle is tested or inspected, the garage must read the odometer and submit the reading to the NPRA. If the vehicle was imported used and first-time registered in Norway after 30 November 2009, the odometer reading from the time of registration will also be displayed in our facility. Odometer discrepancy Discrepancies in odometer reading history is not necessarily a sign of fraud. It may be caused by a simple typing error by the inspector registering the data, the odometer may have been defect or replaced, or numbers have been changed from miles to kilometres. Odometers in old vehicles in many cases go back to zero for every 100 000 km. If the garage (testing centre) registers and reports the wrong odometer reading to us, it will not be corrected. This is because as a supervisory authority we wish to preserve all data as they were reported. This will keep shady operators from speculating in changing the odometer reading up or down. If you discover that the wrong odometer reading has been registered before you leave the garage, the odometer reading can be corrected by deleting the inspection sheet and reporting a new one.
