will change its per³ dica table. Researchers from these groups will propose new names and symbols for these elements. The table per^À ³ dica as we know it is already complete! The Uni^À ³ n of pure and applied chemistry (IUPAC) has announced the verification of the remaining elements: elements 113, 115, 117 and Using this brochure, you can use two different color markers, crayons, colored pencils, etc. Thank you ³ - Barbara M. Try my color activity by number! I taught the 8th graders and even they LOVED this! There are 2 versions for this activity: 1 version³ n includes questions about valence electrons and 1 version³ n does not (which is most appropriate for lower grades) Use the one that best suits your students' needs. Element 113 has the temporary work name unununtrium, with the symbol Uut. The discovery of Element 118 (ununoctium, Uuo) is attributed to a collaboration ³ between the Joint Institute for Nuclear ³ Research in Dubna, Russia and the Lawrence Livermore National Laboratory in California. Of course, if items with higher numbers are discovered, then an additional row will be added ³ the table. Physical Science Curriculum - Growing Package *****
***** The RIKEN Jap^À ³ has not been credited with discovering this item. I wanted a simple handout for my students to use and that was easy to handle. What this means is that the discovery of the elements has been replicated and demonstrated to the satisfaction ³ the scientists according to the 1991 discovery criteria decided by the IUPAP/IUPAC Transfermium Working Group (TWG). The testing of the elements requires a demonstration ³ that the set of child nuclei observed can be inequreattributed to the heavy, new element. I am quick to respond and will do everything I can to help in any way I can. *****
