We've also created a fun new learning series for your young students! Check out our Kindergarten Math Mysteries program and Kindergarten Kickstart Corner program! More About Math Coloring Pages What are the benefits of using math coloring pages? Engagement - For students who get easily distracted or who aren't that interested in math coloring pages can increase their engagement. Math coloring pages are one way to make math more enjoyable. Reinforcement - All students need a little extra reinforcement or review. Some students will be perfectly content completing an extra set of problems from a workbook, while other students will check out. Math coloring pages give all students an easy way to review and solidify concepts without getting bored. Creativity - Math is very black-and-white. There's very little room for self-expression. By pairing the concrete nature of math with the more free-spirited nature of art it allows students to exercise their creativity. Even though the directions pair each number (or sum) with a color, students will be able to choose which shade of color to use. They can choose whether to use crayons, markers, or colored pencils. They can choose whether to press hard on their coloring utensil to concentrate the color or press gently and make the colors light and airy. What age are math coloring pages suitable for? Math coloring pages are good for students of all ages! The coloring pages below are great for preschool and early elementary students. However, they can be used as supplemental activities for older students as well. We offer color by number and color by addition sheets, but you can create color-by-division, algebra coloring pages, Pythagorean theorem coloring pages, and even quadratic formula coloring pages! The options are endless! How to differentiate math coloring pages for students? Offer different levels of difficulty - All of the categories on this page include color-by-number as well as color-by-addition. For students who need practice with number recognition, stick with the color-by-number sheets. For students who can recognize all of their numbers, offer them color-by-addition sheets. Offer visual support - For students who struggle to read, color the color words. This will help reinforce the meaning of the words and allow students to complete the pages without being held back by the language barrier. Offer students a choice - Print off a variety of sheets so students have a say in their education. When students choose which sheet to complete they'll be more apt to finish and do it with a smile.
