Penny Stocks may seem like a good deal because they are so cheap and something can make money! But penny stocks can also be placed for fraud artists, so how do you protect yourself? From Dave Roos if you had the chance to buy a blue-chip bag, you would like you, but if you can't allow you to buy all the actions you would like? You can open a margin account and borrow money, but be careful: you can go completely to the green if things go to the south. Of Ed Grabianowski If you saw the end of the movie "Placement Places", you know the potential result of a margin call. What is this terrifying thing and how do investors have to pay one? From Dave Roosinitial public offers are as high as high finance gets. When popular, previously private companies decide to offer quotas of their stock to the public, the price of that stock can go up to the sky. Here are 10 companies whose IPO have reached the stratosphere. Josh Clarkinitial's public offers often serve as a corporate release party. Investors line up for the purchase of new stocks offered, sending the stock market price - and the net value of the company - in the stratosphere. From Dave Roosday Trading was rather risky business, but now it's a profitable business. You could earn millions if you know the market and make quick and well-informed choices. By William Harris The Nasdaq Marketsite Broadcast Studio is an incredible structure that can accommodate dozens of journalists simultaneously and send direct feeds to all their separate news organizations. Discover the technology behind the Nasdaq Marketsite. From Marshall Brainmillions of people exchange billions of action actions every day on a collection of computer systems that are incredibly reliable and, very almost, inherent. Discover the world's complex of electronic trading. By Marshall Braininitial public offers have been around for centuries - every company with actions that are publicly exchanged on the stock market has had an IPO at a certain point. Find out what an IPO is and how it makes people rich. From Ed Grabianowski stock markets are where traders come together to buy and sell property shares in companies, better known as actions. The stock markets are all over the world, although the United States traditionally had three different types since 1970, exemplified by three separate spare parts. Each of these exchanges serves a different need in the titles market. Companies sell action actions to increase capital. When a person buys a share of shares, he becomes a partner part of a company, and shares the profits and losses generated by that society. Companies that are making a profit can command higher prices for their actions, while those that are not actions that are worth less. Traders try to purchase shares at a lower value and sell them when they reach a higher value, making a profit out of the difference. Since the fate of a company can change the moment at the moment and voices can affect the value of a warehouse, the actions can change the hands more during the course of a day. The largest exchange in the world is the New York bag, or NYSE. It was founded in 1792 and grew international prominence after the First World War. NYSE is the seat of large companies. The NYSE has rigorous limits for companies that will allow recording and the actions issued by registered companies cannot be sold outside exchange. In 2007, NYSE merged with Euronext, the leading market in Europe, which has consolidated NYSE's place as a worldwide first exchange. The American Stock Exchange or AMEX, was founded in 1911 as the New York Curb Market. Started by independent operators who operated road, or "curb", focuses on the stock of small or more risky companies, foreign companies and innovative financial products, such as derivatives, options and funds traded (ETF) as Standard & Poor's Depositary Receipts. NYSE joined the AAMEX in its operations in 2008, keeping it open under the name ofAmex Equities to continue AMEX's position as the primary market for small businesses. NASDAQ, or the National Association of Merchants Automated Quotes, began in 1971 as an all-electronic market. There is no NASDAQ trading plan - every trade is made by your computer or phone. And traders should not be members, as they do with NYSE and AMEX. NASDAQ lists companies from across the spectrum, but is home to a large number of technological stocks, such as Microsoft and Intel. The requirements for eligible shares is very liberal compared to those of NYSE and NYSE Amex Actions; a company must have a minimum stock exchange price of only \$1 and maintain a total minimum value of 1.1 million dollars in stock outstanding. The NASDAQ Small Caps Market deals with companies unable to meet these criteria.
