Your phone turning black and white may appear in one of several different ways. All icons lose color and appear in only black and white. The entire display and every app you open only appear in grayscale. The display still has some color, but it appears faded or a light shade of only one color. Each of these behaviors is a symptom of some setting you might have inadvertently set without realizing it. Understanding which settings can cause this behavior will help you set things back to normal. Your icons or entire phone screen may turn black and white for many reasons. Two of the most common causes are accessibility settings that alter screen or icon colors, as well as power-saving mode options. However, other issues can change screen colors to black and white. These include hardware failures, faulty OS updates, or a faulty charger. To set your display colors back to normal, follow the steps below to reset these settings. The following troubleshooting will start from the most straightforward fix for a black and white phone screen before moving to more advanced or complex solutions. Shut down and restart your phone. Use the correct procedure to restart your Android phone or tablet. Many times, if it's a software malfunction with your OS or an app, a simple restart will resolve the issue with your screen turning black and white. Check if you've recently installed any new apps, and then uninstall them. Deleting apps from your Android phone will often resolve the issue if it just started right after you've installed a new app. Don't forget to check for and remove any hidden apps on Android. Try turning off battery-saving mode. Here's the procedure to disable battery-saving mode on Android. However, the side-effect of a black and white screen while running on low battery power with this turned on is standard on both systems. Disabling it may resolve the issue. Disable Dark Mode on your phone. Dark mode on an Android reduces or eliminates the amount of blue light coming from the screen. This feature may make the display appear black and white or nearly black and white. Check the Grayscale settings. Under Android Accessibility settings, you'll find the Grayscale setting under Screen colors under the Vision menu. If this is enabled, disable it to see if it fixes your screen color issue. Double-check you haven't inverted colors. The inverted colors setting on Android is under the Quick Settings menu. Inverting colors may not make the screen appear black and white on all apps, but if you've accidentally enabled this feature, some screens can appear black and white or otherwise unusual to you. If you've enabled developer mode on your Android, a Color Space option could switch your screen to black and white. If none of the fixes above have worked, you may need to send your phone into the manufacturer or a local repair shop for servicing. FAQ How do I change my phone to black and white? In Android and iOS, go to Accessibility settings and enable Grayscale. This feature saves battery power and makes the display easier on the eyes. How do I fix my flickering phone screen? To fix a flickering phone screen, update your OS and apps, then restart the device. Turn off auto-brightness and blue light filters, then check the charging cable for damage. How do I fix the White Screen of Death on my iPhone? Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! If an iPhone goes missing, well, there's an app for that. (It's Apple's venerable Find My iPhone.) But where's the equivalent for Android? Surely there must be some app-lastic way to locate a rogue Android handset. There are several, actually, so it's just a matter of picking one and getting it set up. I'm partial to Where's My Droid, a free app designed expressly to help you find your lost phone. (And don't let the name fool you: Where's My Droid works with all Android-powered phones running OS 1.6 and later, not just Motorola's Droid series.) The app goes above and beyond the usual method of locating a missing phone: calling it. If your phone is set to vibrate, you're much less likely to hear it. And, of course, if it's not within earshot (i.e., you dropped it at that rest stop on the interstate), calling does no good. With Where's My Droid, you text a secret "attention" word or phrase to the phone. That activates the app's find-me mode, which switches the phone from vibrate to ringer, cranks the volume, and makes it ring for 30 seconds. Alternately, you can text a different word to enable GPS mode. Once the phone locates itself, Where's My Droid will respond with its exact coordinates. (These are provided as latitude and longitude, which you can enter into Google Maps to get a real-world location.) What's nice about Where's My Droid is that, unlike a lot of other phone-finder apps, it's not constantly transmitting location information, so it should have minimal impact on your battery. (And remember: a phone with a dead battery can't be found via app methods.) What's not so nice is that you need access to another phone so you can send your attention-word text messages (and, if necessary, get the GPS reply). Also, if you want remote-wipe capabilities, you'll need Where's My Droid Pro (\$3.99). That version also lets you use a custom ringtone and "found" button. Still, it's hard to argue with a free app that's a potential lifesaver (well, phone-saver, anyway). If you've found a lost-Android app you like better, tell me about it in the comments! Android head logo (Image credit: Android Central) Android 10 has been out for more than a year now, and whether you're excited about its new permission settings for apps or the glorious dark mode, there are plenty of reasons to be eager for it to arrive on your phone. Android 11 has already been available for the Pixel lineup since day one. While we are seeing the likes of Samsung and OnePlus devices getting the latest updates, many handsets are still awaiting the update to Android 10. However, as with all Android updates, there's a difference between when Google launches the final build and when the new software actually arrives on your smartphone. We'll be taking a look at all of the major Android phone makers and breakdown when exactly you can expect an Android 10 update for your device. Let's dive a bit deeper and find out which of the best Android phones have been updated to Android 10. Google Pixel Source: Hayato Huseman / Android Central (Image credit: Source: Hayato Huseman / Android Central) Let's start with Google's own phones, the Pixel series. Android 10 has been guaranteed for every existing Pixel device, with the full list being as follows: Pixel 4a Pixel 4 / Pixel 4 XL Pixel 3a / Pixel 3a XL Pixel 3 / Pixel 3 XL Pixel 2 / Pixel 2 XL Pixel / Pixel XLs of September 3, 2019. Android 10 started rolling out for all of these handsets, making them the first batch of phones to be treated to 10's goodness. Samsung Source: Nirave Gondhia / Android Central (Image credit: Source: Nirave Gondhia / Android Central) Samsung is the big player in the Android world, as well as the biggest player in the entire smartphone world. The needle moves a fair bit when Samsung updates a phone. So far, Samsung has issued its Android 10 update to the following devices: Galaxy Note 20 / Note 20 Ultra Galaxy S20 FE Galaxy S20, S20+, and S20 Ultra Samsung Galaxy Z Fold / Z Fold 2 Galaxy Z Flip / Z Flip 5G Galaxy S10, S10+, S10e, and S10 Lite Galaxy S9 and S9+ Galaxy Note 10, Note 10+, and Note 10 Lite Galaxy Note 9 Galaxy M11 Galaxy M51 Galaxy A71 Galaxy A71 5G Galaxy A70/A70s Galaxy A51 Galaxy A50 Galaxy A42 5G Galaxy A31 Galaxy A30s Galaxy A21 / A21S Galaxy A20/A20s Galaxy A11 Galaxy A10L Source: Alex Dobie / Android Central (Image credit: Source: Alex Dobie / Android Central) In recent years, LG has become notorious for slow, inconsistent Android updates. It pains us to say that, but that's the fact. As of right now, LG has updated the following phones to Android 10: LG Wing LG Velvet LG G8LG G8X LG G7 / G7 One LG G7 ThinQ+ LG V60LG V50LG V40LG Q60LG Stylo 5LG K30LG K50LG K50sLG K61LG Q60Huawei Source: Alex Dobie / Android Central (Image credit: Source: Alex Dobie / Android Central) Huawei is one of the world's largest smartphone companies, with its devices ranging from high-end flagships to low-cost budget options. Almost all of the company's current handsets have already been updated to Android 10, including: Huawei P40 series Huawei P30 series Huawei P20 series Huawei Mate 40 Series Huawei Mate 30E Pro 5G Huawei Mate 20 series Huawei Mate 10 series Huawei Mate X / Mate Xs Huawei Y7a Honor 30 / 30 Pro Honor 20 / 20 Pro / 20 Pro Lite Honor 30S Honor 30i Honor 20SHonor View 20Honor 10X LiteHonor 10Honor View 10Honor 9AHonor 9X / 9X ProHonor 8X Motorola Source: Joe Maring / Android Central (Image credit: Source: Joe Maring / Android Central) Motorola used to be on top of its game when it came to Android updates, but in recent years, the company has gotten slower and more inconsistent with how it handles new software. As of right now, these are all of the Motorola phones that have successfully gotten their Android 10 update: Motorola Edge / Edge+ Moto G 5G Moto G9 Power Moto G8 Plus Moto G8 Play Moto G7 Moto G7 Play Moto G7 Power Moto G7 Plus Moto G Fast Moto Z4 Motorola One / One 5G Motorola One Action Motorola One Fusion+ Motorola One Macro Motorola One Power Motorola One Vision Motorola One Zoom Motorola RAZR / RAZR 5G Moto E (2020) Moto E7 Plus Moto G9 Plus Moto G9 Play Motorola One 5G Ace Moto G Stylus (2021) Moto G Power (2021) Moto G Play (2021) There are a few other phones that we expect to get Android 10 at some point, with those being: Nokia Source: Joe Maring / Android Central (Image credit: Source: Joe Maring / Android Central) When it comes to Android updates, one company that stands out among the rest is Nokia. Led by HMD Global, this current iteration of the Nokia brand has become synonymous with phones that have clean software and get timely, consistent updates. Nokia's been hard at work updating a bunch of its phones to Android 10, with all of the following now running the software: Nokia 8 V 5G UWNokia 9 PureView Nokia 8.3 5G Nokia 8.1 Nokia 8 Sirocco Nokia 7.2 Nokia 7.1 Nokia 7 Plus Nokia 6.2 Nokia 6.1 Plus Nokia 6.1 Nokia 5.3 Nokia 5.1 Plus Nokia 4.2 Nokia 3.4 Nokia 3.2 Nokia 3.1 Plus Nokia 3.1 Nokia 3V Nokia 2.4 Nokia 2.3 Nokia 2.2 Nokia 1 Plus Nokia 1 Nokia 5.1 Nokia 3.1 Nokia 2.1 One Plus Source: Apoorva Bhardwaj / Android Central (Image credit: Source: Apoorva Bhardwaj / Android Central) OnePlus touts fast updates and a fast track to the latest version of Android as a feature of its phones. The company has repeatedly proven that platform updates can be done quickly and fairly bug-free, and that hasn't changed with Android 10. Here are the phones for which Android 10 is now available: OnePlus Nord N10 5G OnePlus Nord N100 OnePlus Nord OnePlus 8 / 8 Pro OnePlus 7T / 7T Pro OnePlus 7 One OnePlus 7 Pro OnePlus 7 Pro 5G OnePlus 6T OnePlus 6 OnePlus 5 / 5T Despite being launched with Android Nougat back in 2017, the OnePlus 5 and 5T were updated to Android 10 on May 27th, 2020. Odds & Ends Source: Apoorva Bhardwaj / Android Central (Image credit: Source: Apoorva Bhardwaj / Android Central) Here are the phones that don't quite belong in our categories above but still deserve a shout-out for rocking Android 10: ASUS ZenFone 7 / 7 Pro ASUS ZenFone 6 ASUS ROG Phone 2 / ROG Phone 3 ASUS ZenFone Max Pro (M1) ASUS ZenFone Max M2 Essential Phone Microsoft Surface Duo HTC Desire 21 Pro 5G Sony Xperia 1 Sony Xperia 5 / Xperia 5 II Sony Xperia 10/10 Plus Sony Xperia 10 II Sony Xperia XZ3 Sony Xperia XZ2 Sony Xperia XZ2 Compact Sony Xperia XZ2 Premium TCL 20 5G TCL 10 5G UW TCL 10L TCL 10 Plus Xiaomi Mi A2 Xiaomi Redmi Note 8 Xiaomi Redmi 7 Xiaomi Mi 10 Xiaomi Redmi K20 / K20 Pro POCO F1 POCO M2 Pro POCO M3 POCO X2 POCO X3 ZTE Axon 10 Pro (Europe only) ZTE Axon 20 5G Nubia Red Magic 5S Android 10: Everything you need to know!
