## Give an example of operating system software

Give an example of how hardware can influence the operating system and software and vice versa. What are some examples of operating systems. What are the 5 examples of operating system. What are some examples of operating system software.

When you turn on your computer, it's nice to think that you have control. There is the Trusty Computer Mouse, which you can move anywhere on the screen, evoking your musical library or internet browser to a minimum Capriccio. Although it's easy to feel like a director in front of your desktop or laptop, there is a lot of inside, and the real man behind the tent that guides the necessary activities is the operating system. Most desktops or portable PCs are pre-loaded with Microsoft windows, Macintosh computers are pre-loaded with Mac OS X. Many business servers use Linux or UNIX operating systems. The operating system (OS) is the first thing loaded on the computer - without the operating system, a computer is useless. Recently, operating systems have started appearing even in smaller computers. If you like to tighten with electronic devices, you are probably pleased that operating systems can now be found on many of the devices we use every day, from mobile phones to wireless access points. Computers used in these small devices have become so powerful that can now actually run an operating system and applications. The computer in a typical modern mobile phone is now more powerful than a desktop computer for 20 years ago, so this progression makes sense and is a natural development. The purpose of an operating system is to organize and control the hardware and software so that the lived device behaves flexibly but predictable. In this article, we will tell you what a piece of software should do to be called an operating system, shows how the operating system on your desktop computer works and offers you some examples of how to take control of other operating systems in a €
