Is hammer a first class lever

www.echantedlearning.com/gifs/lever3.gif A class 3 lever has the effort between the fulcrum and the load. Because the load and the effort are on the same side, they move in the same direction. In a class 3 lever, the effort is always closer to the focus of the load, so class 3 levers are used to make the load faster. The sweep action of a broom is a class lever 3. Unscrew the broom handle near the top (fulcrum) and push the handle near the center (effort) so that the bristles to the other extremity (load) sweep quickly the floor. A fishing rod is another class lever 3. Unscrew the auction at a end (fulcrum) and raises the rod near the center (effort) so that the line to the other end (load) rapidly raises The fish out of the water. The pliers are an example of two class 3 levers set together. The pliers can be used when you don't need the type of force you get from a class 1 caliper or a class 2. Nothing you don't need speed, but you don't want to use your fingers to collect hot food or cold ice . Tweezers are a similar example. What is an example of a class 1 lever? What class lever is a bottle opener? What class lever is a tweezers? Is a first class leverage fuck? Why a bottle opener is a class 2 lever? What is the mechanical advantage of a first-class lever? What are the 3 classes of levers in the human body? What is an example of a 2nd class lever? Is crowbar lever a class 1 lever? Which lever class is hammer? What is the mechanical advantage of a hammer? Is a crowbar a third-class lever? From WikiversitA
