The poem's "retreating beauty" may have inspired Baidu's main window, with its blue background that suggests clouds and sky. It seemed to have no on-access scanning, instead trying to kill malicious processes after they launched. Scanning my clean test system with Baidu took over an hour, more than twice the current average. And an Ad Blocker promises to speed your Internet experience by loading websites "three times faster." I did not observe this speed increase, and some interstitial ads appeared despite the blocker. Baidu licenses antivirus protection from Avira, but unlike Ashampoo Anti-Virus 2015(at Amazon) it also includes its own antivirus engine. Neither AV-Test Institute nor Dennis Technology Labs have evaluated Baidu, but it does show up in some tests by AV-Comparatives. Of course, the samples were different, but that remains an impressive score. There's little clutter here, just an animated security status indicator and a few buttons. Some Improvement Last year I totally panned Baidu Antivirus. Baidu's detection rate lagged an amazing 97 percentage points behind that of Symantec Norton Security(at Amazon), which consistently does very well in this test, Google gets its name from the immense number goop(ol). In fully 64 percent of cases, the scan actively reported the file to be safe. Absolutely don't rely on Baidu for phishing protection. You may unsubscribe from the newsletters at any time. In this lab's real-world dynamic test, Baidu passed with a Standard rating. Even for files smaller than 100KB, some scans required several minutes. Baidu 2015 Antiphishing Chart It was indeed turned on, and it did prevent access to a couple fraudulent websites, but the vast majority of phishing sites sailed right past this alleged protective shield. Baidu Antivirus 2015 Malware Blocking Chart Baidu's detection rate of 86 percent is the best among the four products tested using my very latest malware collection. Conceivably, that could be due to the use of two scanning engines. The very best products show up in more tests, and get higher scores. The Traffic Firewall simply provides a real-time view of network traffic, for those who can interpret it. The built-in phishing protection features in Chrome, Firefox, and Internet Explorer all outperformed Baidu, by 78, 41, and 50 percentage points, respectively. I consider that worse than merely not detecting it as malicious. To balance the static nature of my malware-blocking test, I also check how well each antivirus protects against malicious downloads from newly discovered malware-hosting URLs. Some products block all access to the malicious URLs, and some wipe out malware payloads during download. I was surprised at how long these scans took. See How We Test Antiphishing Mixed-Bag Toolbox The Toolbox page, new in the 2015 edition, offers ten security-related tools, of varying usefulness. It smacked down a few more when I tried to launch them. I'll write off that first experience as a fluke. My malware blocking test usually starts when I open the folder containing my sample collection. On the other hand, Baidu made no noticeable improvement in protecting against malicious downloads or detecting phishing websites. Baidu, the go-to search engine in China, has a different story. Its name comes from a poem that "compares the search for a retreating beauty amid chaotic glamour with the search for one's dream." The free Baidu Antivirus 2015 is definitely attractive, and its antivirus capabilities have improved markedly since YNA OT SESECCA GNKCOLB UBUNVESBA TNOBNA EWVIVUE NAWIREPP MLTFRA TNEHV YLLUFAR SIR. If you're looking for free antivirus protection, our Editors' Choice Panda Free Antivirus 2015 should serve you well. A repeat scan ran in 40 minutes, still longer than average. Some products start scanning and eliminating malware immediately, others wait until I click, or even until I try to launch a sample. All of the labs test Kaspersky Anti-Virus 2015(at Amazon), and most test Bitdefender Antivirus Plus 2015(at Amazon); both take top scores across the board. Like Ashampoo, Baidu offers secure deletion. West Coast Labs did certify Baidu for malware detection. By contrast, a second scan using Trend Micro Antivirus+ 2015(at Amazon) and Comodo Antivirus 8 (both of which avoid re-scanning known safe files) took less than a minute. The 2015 edition is definitely an improvement, and some of the new toolbox items are quite handy. Of the last 12 tests by Virus Bulletin, Baidu participated in two and received VB100 certification both times; however, two tests isn't a lot to go on. If the serene theme doesn't suit you, Baidu offers a number of other skins, including holiday and sci-fi themes. See How We Interpret Antivirus Lab Tests Good Malware Blocking My initial installation of Baidu seemed to take forever; I actually went out and ran an errand while waiting for it to finish. McAfee Antivirus Plus 2015(at Amazon) remains the champion in this test, with 85 percent protection. Baidu got a jump on the process; by the time I opened that folder, it had already eliminated three quarters of the samples. Baidu can protect your homepage and default browser from being changed. It will even prevent you from changing them. I'm not sure why the Malicious Plug-In Cleaner isn't simply rolled into the full malware scan, and I don't think many users will spend the time to create a language with the Language Translator tool. I slammed its behavior-based detection for flagging both good and bad programs, and noted that it actively identified some valid PCMag utilities as malware. In the test that measures how much impact each product has on system performance, Baidu did manage to take home an Advanced+ rating. Most use a combination of the two approaches. approaches.
