ArcGIS Server Basic edition is used primarily to manage multiuser geodatabases and geodata services. ArcGIS Server is also used to manage multiuser geodatabases. Multiuser geodatabases leverage ArcSDE technology, implemented on a relational database management system (RDBMS). Numerous third-party applications are licensed to use ArcGIS Server services, as well. Retrieved 2016-03-07. 2016-02-18. 2016-05-31. ArcGIS Server is available for the Microsoft Windows .NET Framework and the Java Platform. Esri provides developers with application development framework (ADF) and application programming interface (API) including, ArcGIS API for JavaScript, ArcGIS API for Flex, ArcGIS API for Microsoft Silverlight/WPF, ArcGIS API for iOS, BAO API, BAO for iOS.[3] as well as the ArcGIS Mobile software development kit (SDK), and ArcGIS Server REST and SOAP APIs. Typical customer applications include using ArcGIS Server mapping and spatial analysis services in geoportals and spatial data infrastructure, integration with the organization's asset, customer relationship, natural resource, or work order management system, development of situational awareness or common operating picture solutions, online store and resource locators, public-facing Web portals for government transparency, online tracking of weather events, resource movement, or visualizing change over time, sharing of scientific research and modeling, management and delivery of remote sensing data, collaborative mapping and user-generated content applications, as well as managing data collection projects using mobile devices and global positioning system (GPS) and supporting mobile data intelligence. ArcGIS Server extensions include 3D, Spatial, Geostatistical, Network, Geoportals, Image, Data Interoperability, Workflow Manager, and Schematics. Archived from the original (PDF) on 2016-03-08. ArcGIS Server ships in three functional editions, Basic, Standard, and Advanced, with the Advanced edition providing the most functionality. ArcGIS Server Enterprise supports distributed deployment of ArcGIS Server components, unlimited simultaneous connections to a multiuser geodatabase, and unlimited multiuser geodatabase storage capacity. ArcGIS Server Enterprise supports IBM DB2, IBM Informix Dynamic Server, Microsoft SQL Server, Oracle, and PostgreSQL. Esri. In addition, ArcGIS Server editions are available at two levels, scaled according to capacity: Workgroup and Enterprise. ArcGIS Server Workgroup can be deployed on a single machine to support a maximum of 10 simultaneous connections to a multiuser geodatabase. {{cite journal}}: Cite journal requires |journal= (help) ^ a b c d e f g "Esri Support ArcGIS Server 10.7 (10.7.1)". Both ArcGIS Server Standard and Advanced editions support the following types of Web services: Feature (for Web editing), Geodata (for geodatabase replication), Geocode (for finding and displaying addresses/locations on a map), Geometry (for geometric calculations such as calculating areas and lengths), Geoprocessing (for scientific modeling and spatial data analysis), Globe (for 3D and globe rendering), Image (for serving raster data and providing control over imagery delivery, such as satellite imagery or orthophotos), Keyhole Markup Language (KML), Map (for cached and optimized map services), Mobile (for running services on field devices), Network Analyst (for routing, closest facility location, or service area analysis), Search (for enterprise search of GIS assets), Web Coverage Service (WCS), Web Feature Service (WFS) and Transactional Web Feature Service (WFS-T), and Web Map Service (WMS). ArcGIS Server Workgroup supports Microsoft SQL Server Express R1 and R2. With Workgroup, the multiuser geodatabase storage capacity cannot exceed ten gigabytes.
