Slipped upper capital femoral epiphysis

Warning: Can only detect less than 5000 charactersTeenager growth peak indicates a hormonal role. Obesight is another key predisponent factor in the development of the SCFE. [Necessary quote] Fracture takes place in the hypertrophic area of the physical cartilage. Stress on the side sits that the epiphysis to move posteriorly and medially. By convention, the position and alignment in SCFE is described by referring to the report of the proximal fragment (femoral epiphysis) to the normal distal fragment (femoral neck). Because because because Warning: Can only detect less than 5000 characters2012. ^ A B C D and F NOVAIS, Eduardo n.; Millis, Michael B. (December 2012).
