Unformatted Attachment Preview RN Maternal Newborn Online Practice 2023 B Questions and Answers A nurse is caring for a client who is pregnant. Which of the following actions are the nurse's priorities? Gravidia 1, Para 041 weeks of gestation Induction of labor due to postdates - correct answers-Assess cervical dilation is incorrect. The nurse should plan to assess the client's cervical dilation based on the client's contraction pattern or the client's report of an urge to bear down; however, there are other actions that the nurse should take first. Administer a bolus of IV fluids is correct. A priority intervention that the nurse should perform when using the urgent vs. nonurgent approach to client care is to address the client's hypotension and fetal bradycardia and minimal variability. The nurse should plan to administer a bolus of IV fluids to increase the client's blood volume and improve uterine and intervillous space blood flow. Insert an indwelling urinary catheter is incorrect. The nurse should plan to insert an indwelling urinary catheter if the client is unable to empty their bladder. A full bladder can impede fetal descent through the pelvis; however, there are other actions that the nurse should take first. Reposition the client to their side is correct. A priority intervention that the nurse should perform when using the urgent vs. nonurgent approach to client care is to address the fetal bradycardia and minimal variability caused by decreased uteroplacental perfusion. The nurse should plan t...
