

Best media player for android

Continue

Nowadays, smartphones have become an essential source of entertainment, with the help of which people can entertain themselves, and along with that, they can stay connected with the world virtually. But the main point is that there are several applications that we would have to install in our smartphones and they can get rid of our boredom along with taking help from any external application. A couple of years ago offline media, including movies and music was the only source of entertainment and in this era of OTT platforms, some people still prefer playing media on the smartphones that they have downloaded from torrent or any other platform and for this, it requires some special applications that can run all file forms. 5 Offline Media Player Apps To make things easy, here is the list of the 5 best offline media player applications with the help of which you would be able to take advantage of video and music files efficiently. VLC Player VLC player is one such offline Media Player Apps that is considered as one of the best and must-have applications. Although the overall look and UI of this application might not be modern, the app is simple and easy to use. It offers you several unique features that you can't even get with various premium offline Media Player Apps on android. Also Read: Best Apps For Android And iOS To Help You Work From Home Also, you would be able to stream videos with the help of its URL only, along with that it offers the support of various video formats such as DVD ISOs and many more. There is the support of additional plugins also that can enhance the overall user experience of these offline Media Player Apps. This media player has the compatibility of playing most types of files, along with that, it supports several codecs that enhance its compatibility. VLC player has the support of almost every android version, which states that you would be able to play nearly every kind of media format on any android device.No matter what kind of media file you are going to use, you would not have to download any advanced plugin or codecs. VLC player contains all such essential codes in-built in it. You would be able to stream online files also and that too directly with the help of their URL. This is an exceptional feature that most of the premium media players don't even have. It is an extremely convenient and effective offline Media Player Apps that you will ever use in your android smartphone. Download Link: Click here to download VLC Player MX Player is such an Offline Media Player Apps that is always trying to provide the best to its users. Hence they keep on adding new features to their application. With this media player, you would be able to take advantage of the most customizable features with which you can get an enhanced video streaming and music listening experience. There are several exceptional features that you can get with MX Player, and one of those features is gesture control, with the help of which you would be able to control your music and video playing work with in-built gestures. You would be able to take advantage of fantastic playback features such as hardware and software decoding. It also offers support for various media formats that are AVI, FLV, MKV, MOV and many more. There are very few media players that offer subtitle support, but you would be able to take advantage of this feature with MX Player. It offers a great feature of audio boost, with the help of which you would be able to increase the volume of your video or music files above a specific limit. In this case, you would need to change your decoder in the settings, and that's it. You would be able to play network streams; also, you just need to enter the network URL. Download Link: Click here to download MX Player Also Read: Top 5 Wallpaper Apps for Android AllCast In case you are trying to find suchOffline Media Player Apps that can play audio and video files along with that you can stream the content stored on Chromecast, Roku, Apple TV, and various such devices? Update(Jan 2021) - Offline Media Player Apps XPlayer (video player for all format) It is one of the best Offline Media Player Apps which lets you play both video & music. It supports nearly every format of video. Ranging from 4K video playback to 3GP, FLV, WMV, this application supports everything. It supports decoding software so you can encrypt the videos here. Xplayer also lets you hide personal videos or files using the private folder feature. You can password protect it to restrict their access. It also supports subtitles downloads so you can download any movie & translate it. XPlayer also has other features like night mode, protected mode to enrich your video experience. It also adjusts auto-rotation & aspect ratio top provides you with a premium quality video experience. Video streaming has taken over in a big way. A lot of people have Netflix, Hulu, VRV, and even YouTube subscriptions as their primary video streaming services. However, there are still plenty of us out there with video files on our phones. Viewing videos isn't nearly as difficult as it used to be. Most video player apps can play the most popular video codecs without issues. That is unless you use some weird codec.Even if you do, you still have plenty of options to view it. Let's check out the best video player apps for Android. Kodi is a good option that we do not include on this list because it operates as more of a media player. We have that list linked up toward the bottom of this article. The best video player apps for Android AllCast is a video player that specializes in sending your locally stored content to your Chromecast, Roku, Apple TV, Xbox 360/One, and other DLNA compliant devices. Along with videos, it also supports other types of media. It has a bit of a rough start, but has quickly become one of the most stable casting apps out there. The free version has a five-minute limit for content while the pro version has no limitations. You can also turn your Android device into an AllCast receiver (capable of being casted to) with the AllCast Receiver app. Archos is one of the more popular video player apps on Android. It supports most video file types, including MKV, MP4, AVI, WMV, FLV, etc along with various subtitle file types like SRT, SUB, ASS (yes, for real), SMI, and others. Of course, there are other features as well, like server and NAS support, external USB storage support, and more. The app also includes a relatively modern interface, simple controls, and information from sites like IMDb, themovieclub.org, and others. In practice, we didn't find any real issues with it, although some Google Play reviewers have. In any case, it's a solid option with a cheap pro version. Joe Hindy / Android AuthorityBSPlayer has been around for longer than most video player apps and has continued to be one of the best in all that time. It features multi-core hardware decoding, hardware-accelerated playback, and support for streaming from network (DLNA) devices. On top of that, there is subtitle support, the ability to play files from compressed formats, and you can even have a pop-up window if you want to. The free version is ad-supported, but has all of the features. There are also additional plugins for even better support. The full version runs for \$5.99. Price: Free with in-app purchasesLocalCast is a competitor to AllCast and they perform a lot of the same functions. That includes streaming media from your device to a Chromecast, Xbox 360/One, Roku, Fire Stick, or Apple TV. Along with AllCast, it allows for streaming from cloud storage (Google Drive, Dropbox), and it should work on most DLNA compliant devices. It does only have the codecs that the Chromecast supports. That should be most major codecs these days, though. Even so, it's one of only a few respectable video player apps that perform this function. MX Player has long been one of the most popular video player apps. It supported more formats long before other video player apps thought to do so and it was also among the first to include things like hardware decoding, hardware-accelerated playback, and other such features. It still has all of those things along with gesture controls (including pinch-to-zoom), subtitle support, a kids lock to keep your kids in the app watching their Disney movies, and it supports virtually every codec out there. Like MoboPlayer, it comes with additional plugins to add more functionality if you need them. Price: Free / \$4.99 / \$4.99 per monthPlex is currently the best answer to the question of what to do if you have a lot of videos and only 32GB of storage on your phone. Plex allows you to set up a server on your computer and then it will stream content from your computer to your smartphone. It's a bit unique from other video player apps, but it also doesn't require you to keep your files on your device. That frees up valuable storage space for other stuff. The service is free to set up, the mobile app costs \$4.99, and you can get an optional \$4.99 per month subscription to unlock all of the Plex Pass features. VLC has quickly made a name for itself as one of the must-have video player apps. It has a slew of unique features, including the ability to stream videos if you have the URL. It can also play some obscure video formats, like DVD ISOs. Unlike most, it also has all of its codecs built-in without the need for additional plugin downloads. Other features include subtitle support, full media support (including audio), multi-track audio, and more. There is also a beta version in case you want to try out the latest features. Video Player All Formats is a basic video player app. It's also a bit of a diamond in the rough. It boasts support for most video codecs. Some of the other features include Chromecast support, a night mode, a privacy folder, and variable speed playback controls. It seems to tick all the right boxes during our testing. Additionally, it boasts no banner ads although there are some in other spots. You can unlock the ad-free version for \$3.99. It's definitely one of the weaker picks on our top ten, but it's still good enough to be here. Xender is a combination of a file transfer app and a video player. You can share music and movies with people in your general vicinity without using mobile data. Additionally, the app can play most movies and music files without much difficulty. That makes it a decent option for those kinds of things, although it doesn't have any advanced viewing or playback controls like many dedicated video player apps. It's a good one-two punch for those who need to share media with their friends and then also watch or listen to that media. It's free and it's surprisingly popular. Your device's stock video player has made great strides since the old days. These days, they'll play just about everything. You already have it in your app drawer. It already takes up storage and you usually can't get rid of it. You might as well at least give it the old college try. Android in general gets better and better video codec support every year, including HDR VP9 as of Android Pie. OEMs usually put support for all of this stuff in the stock video player. Some of them can even play streams like VLC. In any case, give it a real shot before switching to something else. It's usually the path of least resistance.
